

Drug Plasma Concentration–Time Profile (Linear Scale)

Mean ± SD (n = 9 per time point)

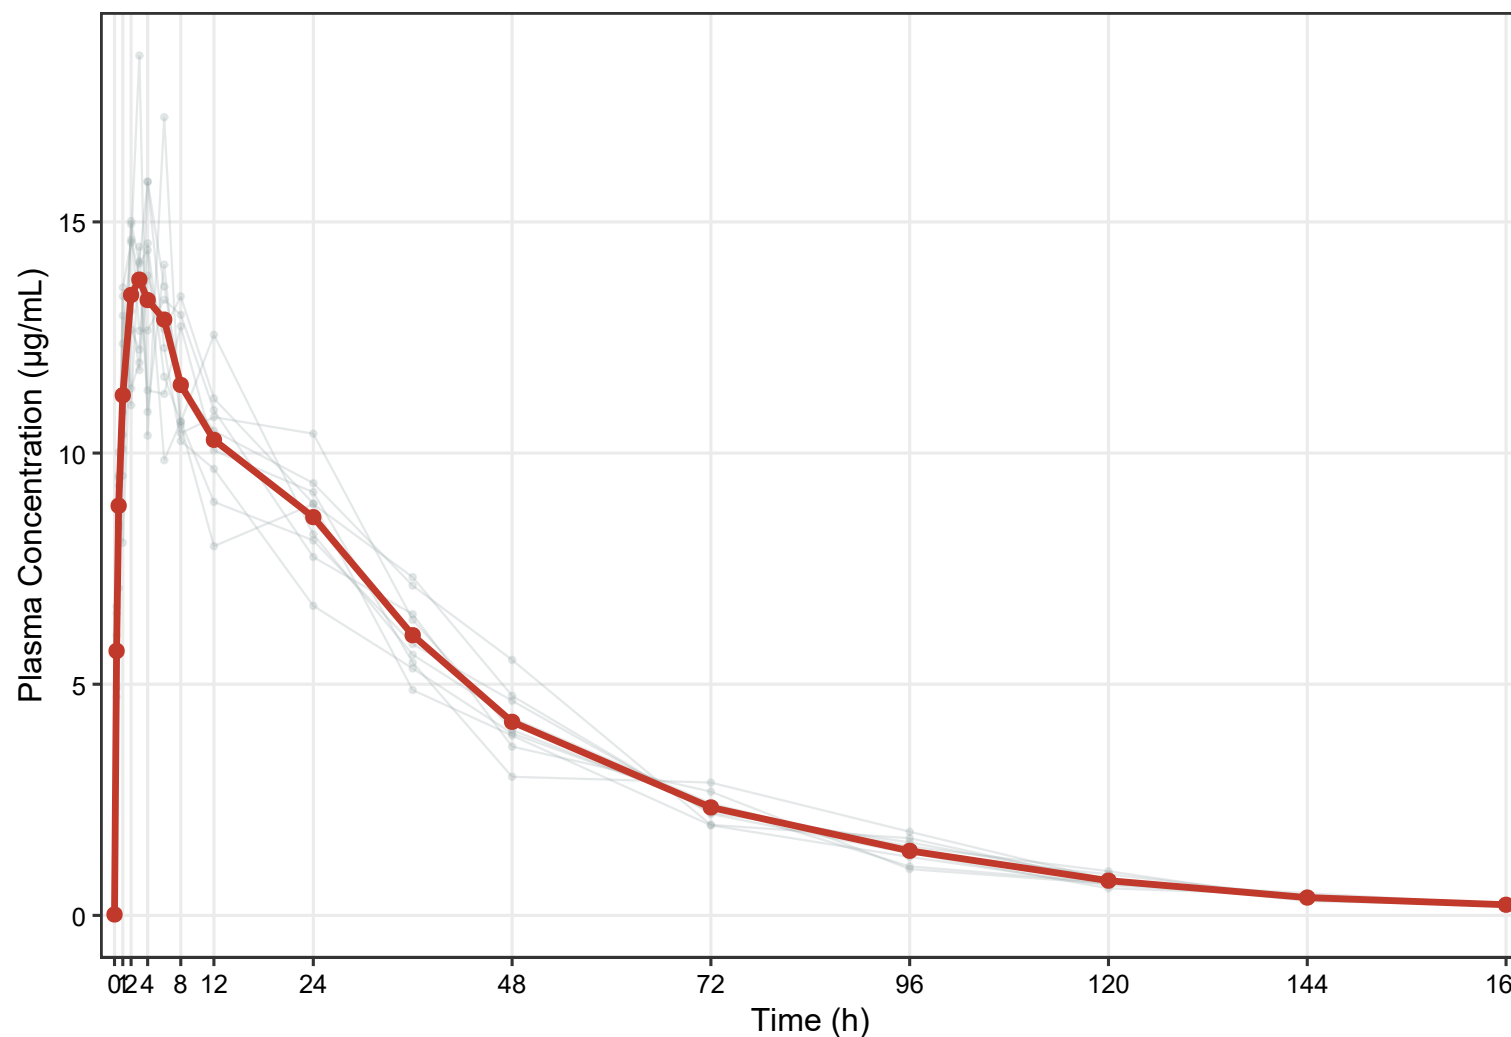

Drug Plasma Concentration–Time Profile (Semi-log Scale)

Dashed line: terminal phase fit ($\lambda_z = 0.02482 \text{ h}^{-1}$)

Individual Replicate Profiles with Mean Overlay

Gray: 9 individual replicates; Red: mean

Terminal Phase Elimination Fit

Green triangles: points used for λ_z estimation; dashed line: regression fit
